

Cube Escape 3D free license, this template can be used for personal or commercial purposes.

If you have used this template to create a game or develop an existing one, if you want feel free to share it with us for the gallery on the official Fly Studios website. Send videos or photos to : flystudiosassets@gmail.com

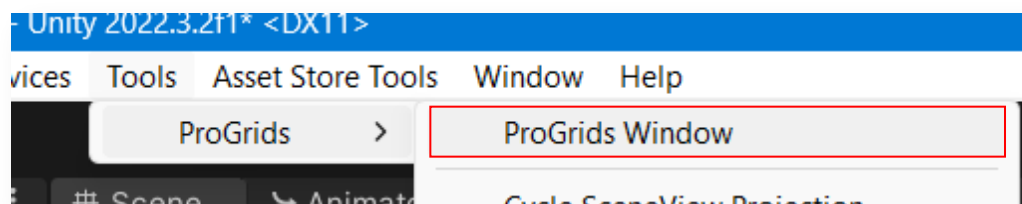

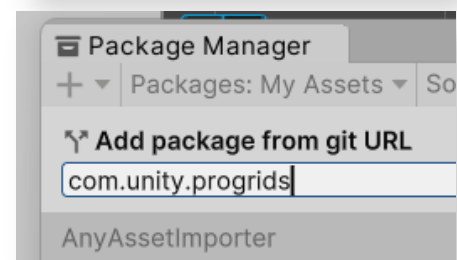

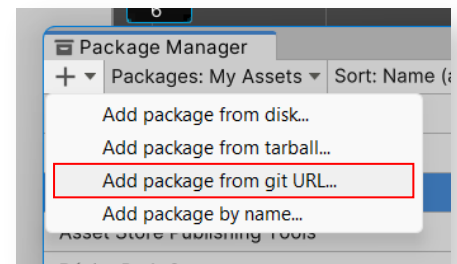

Installing ProGrids (Optional)

First of all, we need to configure the project. The levels are built from blocks! To make levels easier and faster, we need to install this package. Or other alternatives.

Open Package Manager and open Add Package from git Url, and insert this text. [com.unity.progrids](https://github.com/unity-progrids)
Or visit <https://gist.github.com/roydejong/cd4a42a958e14f9eaa7-da8e5acb50a7e>

Once you have installed Pro Grids, go to the path, **Tools > ProGrids > ProGrids Window**.

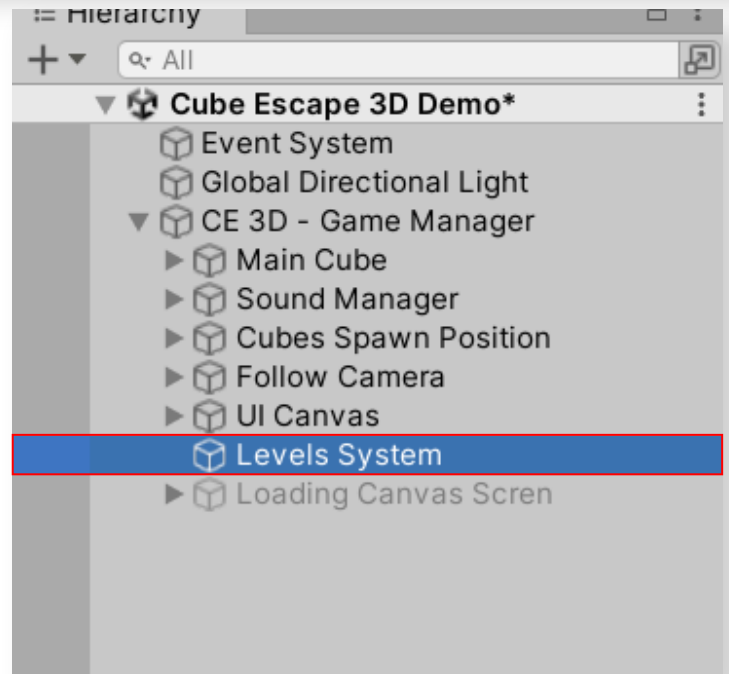

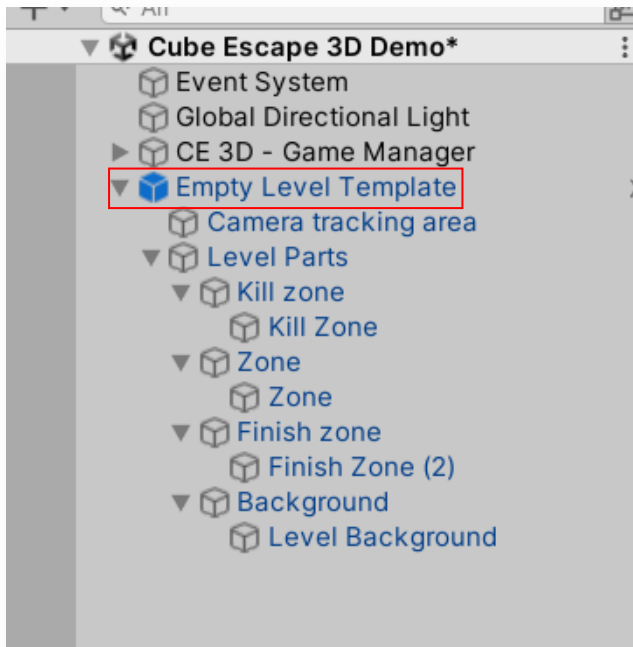

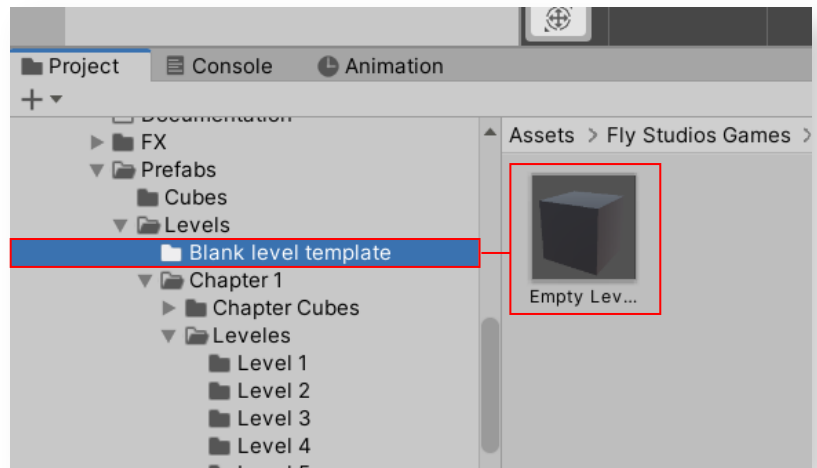

In the scene the window of this tool will appear and activate the grid in the scene, the top value is the grid size, so if the blocks are 1x1 then the grid size should be 1.

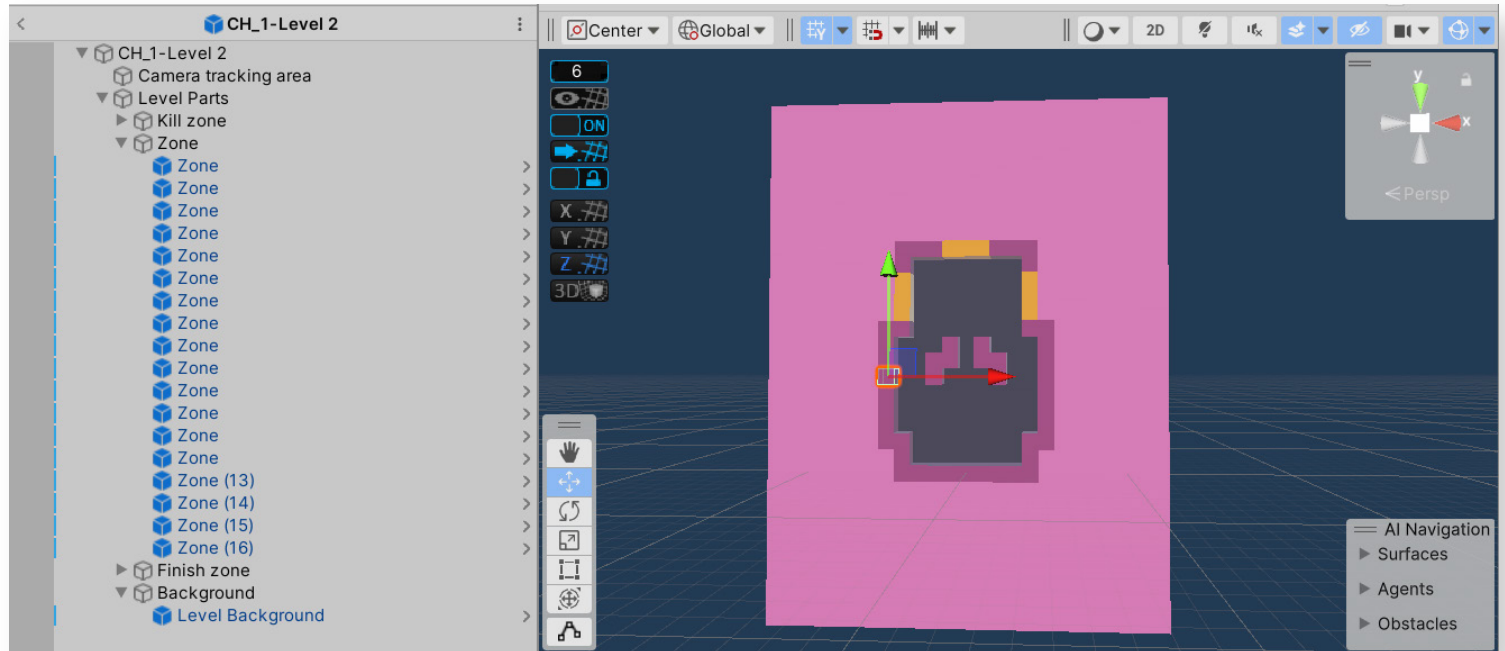

Adding New Levels

Add the "Blank level template" prefab to the scene, which can be found in the [Assets/Fly Studios Games/Cube Escape 3D/Prefabs/Levels/Blank level template/Empty Level Template.prefab](#).

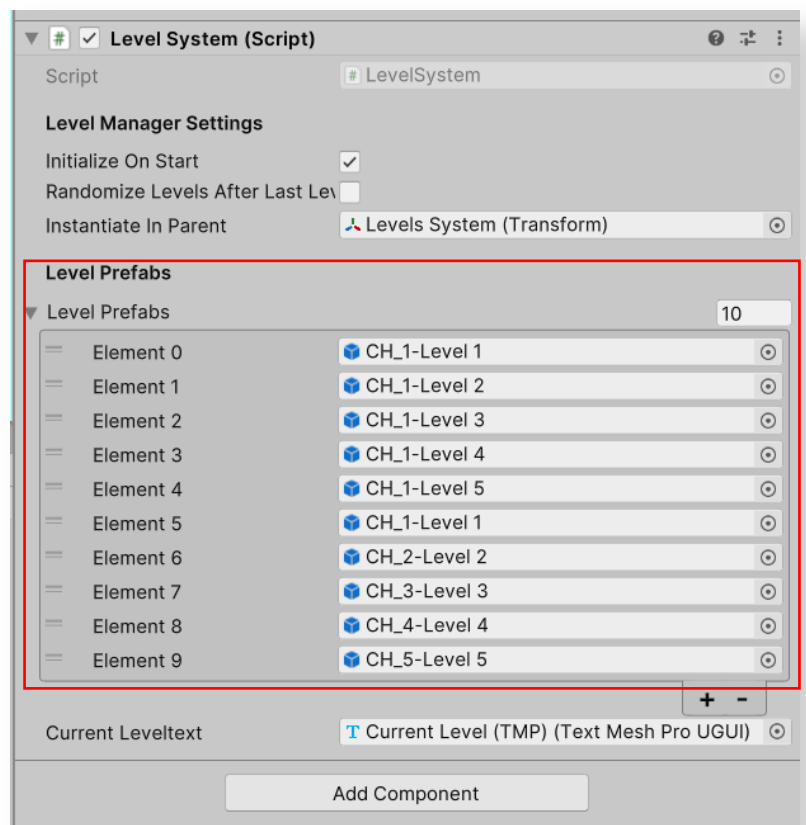

and modify it to your requirements, this is for convenience, you can create it by any method, Cubes must have a collider and tag. "KillZone" or "WinLevel" these can be modified as per your requirements.

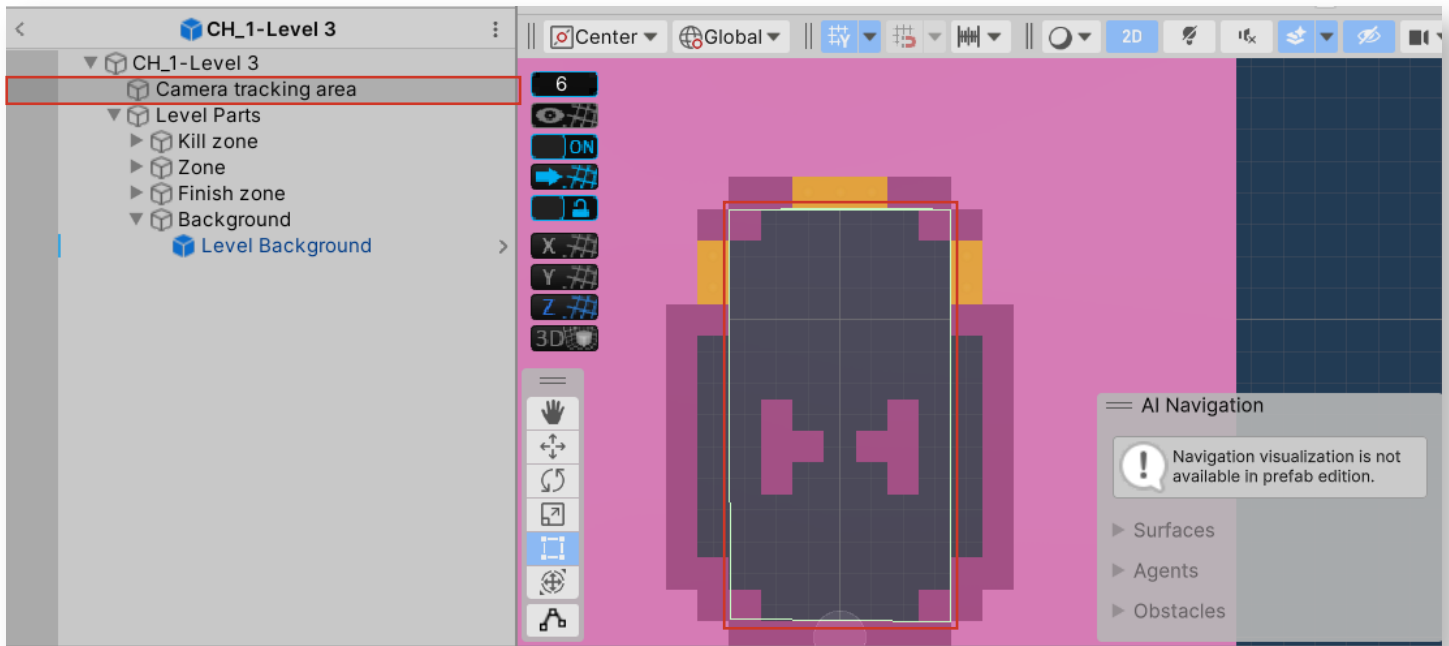

In the "Empty level Template" prefab there are all the blocks you need to build a level, so using the primitive method of doubling the block you need, you arrange the level any way you want.

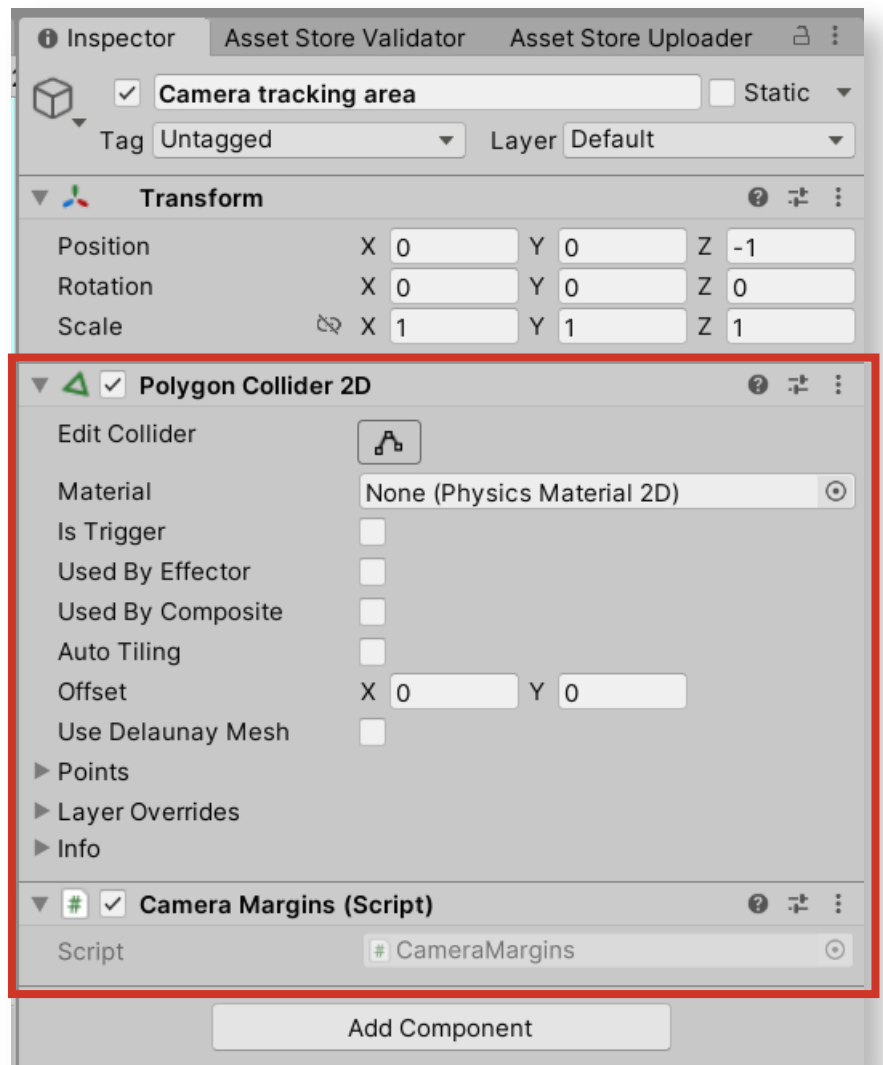

After you have finished building the level, make it a prefab, and add the level (level prefab) to the Level Prefabs list in the "Level System" script.

Camera Bounds

To limit the camera inside the level we use a "2D Polygon Collider" + the script "Camera Margins" they work in tandem!, For each level we will create a different shape, individually for each level. The camera will automatically pick up these limits and implement them during gameplay.

Customization

In the Game Manager script you can change game parameters and add something custom using the events in the inspector.
